

Corsec Maintenance & Compliance Services

Secure Your Certification's Future

Technology and products change. Standards and certifications evolve. Corsec's **Maintenance & Compliance Services** ensure products stay compliant to the Standards over time.

The Big Difference: Major and Minor Reevaluation

Each security certification has its own unique requirements for maintenance and renewal. Corsec helps customers through the maze and to a path forward.

FIPS 140-2

From a Change Letter to a 5SUB, FIPS 140-2 has a plethora of maintenance requirements and options. Corsec helps determine which scenario most closely aligns to the latest version of the client's product.

Common Criteria

Common Criteria determines reevaluation through the Assurance Continuity process. If major changes have occurred in the security environment, evidence needs to be submitted to a laboratory and the product needs to be reevaluated. If minor changes have occurred, a vendor can perform "Assurance Maintenance".

UC APL

With the DoD's UC APL, the Desktop Review is the maintenance program which allows listed products to stay updated and compliant. Corsec reviews product releases, release notes, and roadmap changes in order to advise clients on applicability of the Desktop Review process.

Keep Products Market-Ready

Corsec helps companies protect their investment in certifications and ensures their continued compliance to the changing standards.

Why Corsec?

Corsec is the global leader in providing access to new markets via IT security validations. With the largest staff of experts in the industry and a comprehensive solution that spans consulting, documentation, testing, enterprise lab services, and strategic product roadmap planning, Corsec has secured more than 350 FIPS 140-2, Common Criteria and UC APL certifications for hundreds of organizations on five continents over the last 15 years.
